

Last Time: Determinants

Prop: Every matrix M can be expressed as

$$M = E_n E_{n-1} \cdots E_1 \cdot \text{RREF}(M)$$

Recall: \det is multiplicative.

$$\text{i.e. } \det(AB) = \det(A) \det(B).$$

Point: ① "Computing $\text{RREF}(M)$ can also compute $\det(M)$."

$$\textcircled{2} \det(M) = \det(E_n) \det(E_{n-1}) \cdots \det(E_1) \cdot \underline{\det(\text{RREF}(M))} \\ = 1 \text{ or } 0.$$

Change of Basis

Recall: Given basis $B = \{b_1, b_2, \dots, b_n\}$ of V.S. V , every vector of V has a representation w.r.t. B .

$v \in V$ can be expressed uniquely as $v = \sum_{i=1}^n c_i b_i$.

The corresponding representation is $[v]_B = \begin{pmatrix} c_1 \\ c_2 \\ \vdots \\ c_n \end{pmatrix} \in \mathbb{R}^n$.

NB: $\text{Rep}_B(v)$ is the textbook's notation for $[v]_B$

Ex: In \mathbb{R}^3 w/ $B = \left\{ \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix}, \begin{pmatrix} 1 \\ 1 \\ 0 \end{pmatrix}, \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix} \right\}$, we have

$$[v]_{E_3} = \begin{pmatrix} 2 \\ -3 \\ 5 \end{pmatrix} \rightsquigarrow \text{what w.r.t. } B?$$

$$c_1 \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix} + c_2 \begin{pmatrix} 1 \\ 1 \\ 0 \end{pmatrix} + c_3 \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix} = \begin{pmatrix} 2 \\ -3 \\ 5 \end{pmatrix} \rightsquigarrow \begin{cases} c_1 + c_2 + c_3 = 2 \\ c_2 + c_3 = -3 \\ c_3 = 5 \end{cases}$$

$$\left[\begin{array}{ccc|c} 1 & 1 & 1 & 2 \\ 0 & 1 & 1 & -3 \\ 0 & 0 & 1 & 5 \end{array} \right] \rightsquigarrow \left[\begin{array}{ccc|c} 1 & 0 & 0 & -3 \\ 0 & 1 & 0 & -8 \\ 0 & 0 & 1 & 5 \end{array} \right] \rightsquigarrow \left[\begin{array}{ccc|c} 1 & 0 & 0 & 5 \\ 0 & 1 & 0 & -8 \\ 0 & 0 & 1 & 5 \end{array} \right] \rightsquigarrow \begin{cases} c_1 = 5 \\ c_2 = -8 \\ c_3 = 5 \end{cases}$$

$$\therefore [v]_B = \begin{pmatrix} c_1 \\ c_2 \\ c_3 \end{pmatrix} = \begin{pmatrix} 5 \\ -8 \\ 5 \end{pmatrix}.$$

* Given two bases B, B' of vector spaces V and V' respectively, and given function $f: B \rightarrow B'$ there is a corresponding linear map $F: V \rightarrow V'$ with $F\left(\sum_{i=1}^n c_i b_i\right) = \sum_{i=1}^n c_i f(b_i)$.

Defn: A change of basis matrix is the matrix of a linear map $L: V \rightarrow V$ such that L is induced by a bijection $L: B \rightarrow B'$ for two bases B, B' of V .

Ex: Let $B' = \left\{ \underbrace{\begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix}}_{b_1}, \underbrace{\begin{pmatrix} 1 \\ 1 \\ 0 \end{pmatrix}}_{b_2}, \underbrace{\begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix}}_{b_3} \right\}$ and $B = \underline{E_3} = \{e_1, e_2, e_3\}$

The change of basis matrix for these bases is...

$$\left[\begin{array}{ccc|ccc} 1 & 1 & 1 & 1 & 0 & 0 \\ 0 & 1 & 1 & 0 & 1 & 0 \\ 0 & 0 & 1 & 0 & 0 & 1 \end{array} \right] \rightsquigarrow \left[\begin{array}{ccc|ccc} 1 & 0 & 0 & 1 & -1 & 0 \\ 0 & 1 & 1 & 0 & 1 & 0 \\ 0 & 0 & 1 & 0 & 0 & 1 \end{array} \right]$$

$$\rightsquigarrow \left[\begin{array}{ccc|ccc} 1 & 0 & 0 & 1 & -1 & 0 \\ 0 & 1 & 0 & 0 & 1 & -1 \\ 0 & 0 & 1 & 0 & 0 & 1 \end{array} \right]$$

\therefore the change of basis matrix B to B' is

$$\text{Rep}_{B, B'}(\text{id}) = \begin{bmatrix} 1 & -1 & 0 \\ 0 & 1 & -1 \\ 0 & 0 & 1 \end{bmatrix}.$$

Point: Representation matrix $\text{Rep}_{B,B'}(\text{id})$

when applied to $[v]_B$ outputs $[v]_{B'}$.

I.E. $\text{Rep}_{B,B'}(\text{id}) \cdot [v]_B = [v]_{B'}$.

NB: $\text{Rep}_{B,B'}(\text{id}) = \left[[b_1]_{B'} \mid [b_2]_{B'} \mid \dots \mid [b_n]_{B'} \right]$.

Ex: Let $B = \left\{ \begin{pmatrix} 2 \\ 1 \end{pmatrix}, \begin{pmatrix} 1 \\ 0 \end{pmatrix} \right\}$ w/ $B' = \left\{ \begin{pmatrix} 1 \\ 1 \end{pmatrix}, \begin{pmatrix} 1 \\ 1 \end{pmatrix} \right\}$.

we compute $\text{Rep}_{B,B'}(\text{id})$ as follows: $[B' \mid B] \rightsquigarrow [I_n \mid \dots]$

$$\left[\begin{array}{cc|cc} -1 & 1 & 2 & 1 \\ 1 & 1 & 1 & 0 \end{array} \right] \rightsquigarrow \left[\begin{array}{cc|cc} 1 & -1 & -2 & -1 \\ 1 & 1 & 1 & 0 \end{array} \right]$$

$$\rightsquigarrow \left[\begin{array}{cc|cc} 1 & -1 & -2 & -1 \\ 0 & 2 & 3 & 1 \end{array} \right] \rightsquigarrow \left[\begin{array}{cc|cc} 1 & -1 & -2 & -1 \\ 0 & 1 & \frac{3}{2} & \frac{1}{2} \end{array} \right]$$

$$\rightsquigarrow \left[\begin{array}{cc|cc} 1 & 0 & -\frac{1}{2} & -\frac{1}{2} \\ 0 & 1 & \frac{3}{2} & \frac{1}{2} \end{array} \right]$$

$$\therefore \text{Rep}_{B,B'}(\text{id}) = \begin{bmatrix} -\frac{1}{2} & -\frac{1}{2} \\ \frac{3}{2} & \frac{1}{2} \end{bmatrix}$$

OTOH $\text{Rep}_{B',B}(\text{id})$:

$$[B \mid B'] \rightsquigarrow [I_n \mid \text{Rep}_{B',B}(\text{id})]$$

$$\left[\begin{array}{cc|cc} 2 & 1 & 1 & 1 \\ 1 & 0 & 1 & 1 \end{array} \right] \rightsquigarrow \left[\begin{array}{cc|cc} 1 & 0 & -1 & 1 \\ 2 & 0 & -1 & 1 \end{array} \right] \rightsquigarrow \left[\begin{array}{cc|cc} 1 & 0 & -1 & 1 \\ 0 & 0 & -3 & -1 \end{array} \right]$$

$$\therefore \text{Rep}_{B', B}(\text{id}) = \begin{bmatrix} 1 & 1 \\ -3 & -1 \end{bmatrix}.$$

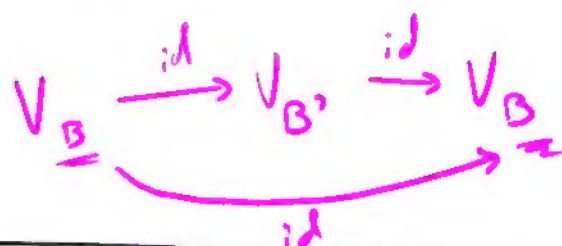

NB: $\text{Rep}_{B, B}(\text{id}) = I_n$

↳ because it fixes each basis element.

Computationally: $[B | B] \rightsquigarrow [I_n | \underline{I_n}] \rightsquigarrow \text{''}$

$$\text{Rep}_{B', B}(\text{id}) \cdot \text{Rep}_{B, B'}(\text{id}) = \text{Rep}_{B, B}(\text{id}) = I_n$$

Point: $\text{Rep}_{B', B}(\text{id}) = (\text{Rep}_{B, B'}(\text{id}))^{-1}$

Prop: An $n \times n$ matrix M is a change of basis matrix if and only if M is nonsingular.

Sketch: If M is nonsingular: then M^{-1} exists.

The columns of M^{-1} form a basis B for \mathbb{R}^n .

Hence we consider the matrix representation

$$\text{Rep}_{E_n, B}(\text{id}) = M : [M^{-1} | I_n] \rightsquigarrow [I_n | M]$$

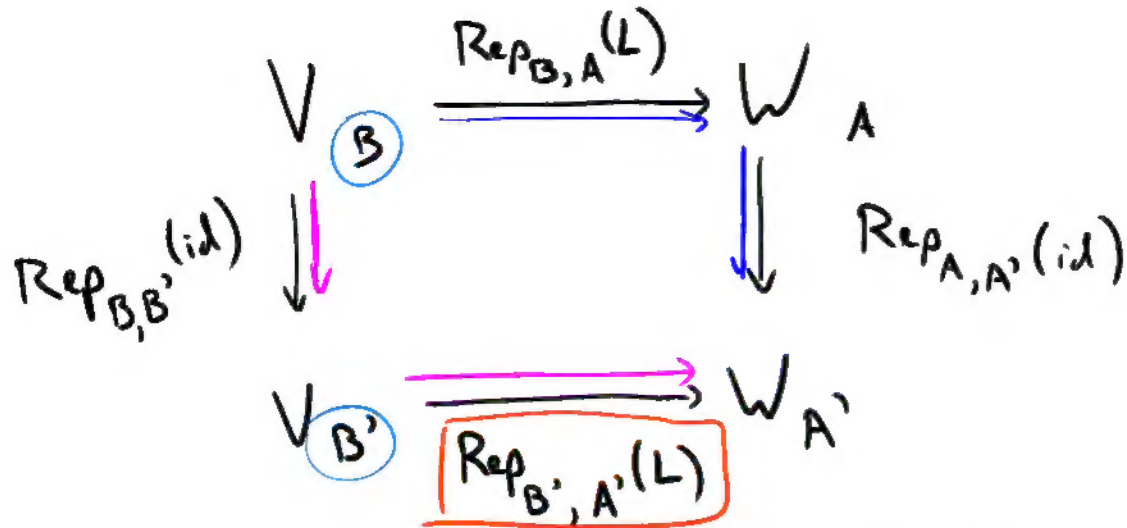

If M is a change of basis matrix, then

$$M = \text{Rep}_{B, B'}(\text{id}), \text{ so } M^{-1} = \text{Rep}_{B', B}(\text{id}).$$

Q: How does changing basis "play with" linear maps in general?

A: Draw a picture...

$$\text{Rep}_{A,A'}(\text{id}) \cdot \text{Rep}_{B,A}(L) = \text{Rep}_{B',A'}(L) \cdot \text{Rep}_{B,B'}(\text{id})$$

B', B

$$\text{Rep}_{B',A'}(L) = \underbrace{\text{Rep}_{A,A'}(\text{id})}_{\text{Basis change in } W} \cdot \underbrace{\text{Rep}_{B,A}(L)}_{\text{Apply } L} \cdot \underbrace{\text{Rep}_{B',B}(\text{id})}_{\text{Basis change in } V}$$

Point: We can represent any linear map of finite-dimensional vector spaces w.r.t. our preferred bases on the domain and Codomain.

Ex: Consider the linear operator on \mathbb{R}^3 given by

$$L \begin{pmatrix} x \\ y \\ z \end{pmatrix} = \begin{pmatrix} y + z \\ x \\ x + y + z \end{pmatrix} = \begin{bmatrix} 0 & 1 & 1 \\ 1 & 0 & 0 \\ 1 & 1 & 0 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \end{bmatrix}$$

$$\text{Rep}_{\underline{E_3}, \underline{E_3}}(L) = \underline{\underline{\begin{bmatrix} 0 & 1 & 1 \\ 1 & 0 & 0 \\ 1 & 1 & 0 \end{bmatrix}}}$$

Let $B = \left\{ \begin{pmatrix} 1 \\ -1 \\ 0 \end{pmatrix}, \begin{pmatrix} 1 \\ 1 \\ -2 \end{pmatrix}, \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix} \right\}$.

NB: I copied B incorrectly from my notes during lecture... changes are in this color

$$\text{Rep}_{B,B}(L) = \text{Rep}_{B,E_3}(\text{id}) \cdot \text{Rep}_{E_3,E_3}(L) \cdot \text{Rep}_{E_3,B}(\text{id})$$

$$\begin{array}{ccc}
 \mathbb{R}_{E_3}^3 & \xrightarrow{\text{Rep}_{E_3,E_3}(L)} & \mathbb{R}_{E_3}^3 \\
 \text{Rep}_{E_3,B}(\text{id}) \downarrow \quad \uparrow \text{Rep}_{B,E_3}(\text{id}) & & \downarrow \text{Rep}_{E_3,B}(\text{id}) \\
 \mathbb{R}_B^3 & \xrightarrow{\text{Rep}_{B,B}(L)} & \mathbb{R}_B^3
 \end{array}$$

 =

Hw: Compute $\text{Rep}_{B,B}(L)$...

$$\text{Rep}_{B,E_3}(\text{id}): \left[\begin{array}{ccc|ccc} 1 & 0 & 0 & 1 & 1 & 1 \\ 0 & 1 & 0 & -1 & 1 & 1 \\ 0 & 0 & 1 & 0 & 2 & 1 \end{array} \right] \rightsquigarrow \text{Rep}_{B,E_3}(\text{id}) = \begin{bmatrix} 1 & 1 & 1 \\ 0 & 2 & 1 \end{bmatrix}$$

$$\text{Rep}_{E_3,B}(\text{id}): \left[\begin{array}{ccc|ccc} 1 & 1 & 1 & 1 & 0 & 0 \\ -1 & 1 & 1 & 0 & 1 & 0 \\ 0 & 2 & 1 & 0 & 0 & 1 \end{array} \right]$$

$$\rightsquigarrow \left[\begin{array}{ccc|ccc} 1 & 1 & 1 & 1 & 0 & 0 \\ 0 & 2 & 2 & 1 & 1 & 0 \\ 0 & -2 & 1 & 0 & 0 & 1 \end{array} \right] \rightsquigarrow \left[\begin{array}{ccc|ccc} 1 & 1 & 1 & 1 & 0 & 0 \\ 0 & 2 & 2 & 1 & 1 & 0 \\ 0 & 0 & 3 & 1 & 1 & 1 \end{array} \right]$$

$$\rightsquigarrow \left[\begin{array}{ccc|ccc} 1 & 1 & 1 & 1 & 0 & 0 \\ 0 & 1 & 1 & \frac{1}{2} & \frac{1}{2} & 0 \\ 0 & 0 & 1 & \frac{1}{3} & \frac{1}{3} & \frac{1}{3} \end{array} \right] \rightsquigarrow \left[\begin{array}{ccc|ccc} 1 & 1 & 0 & \frac{2}{3} & -\frac{1}{3} & -\frac{1}{3} \\ 0 & 1 & 0 & \frac{1}{6} & \frac{1}{6} & \frac{2}{3} \\ 0 & 0 & 1 & \frac{1}{3} & \frac{1}{3} & \frac{1}{3} \end{array} \right]$$

$$\rightsquigarrow \left[\begin{array}{ccc|ccc} 1 & 0 & 0 & \frac{1}{2} & -\frac{1}{2} & -1 \\ 0 & 1 & 0 & \frac{1}{6} & \frac{1}{6} & \frac{2}{3} \\ 0 & 0 & 1 & \frac{1}{3} & \frac{1}{3} & \frac{1}{3} \end{array} \right] \rightsquigarrow \text{Rep}_{E_3,B}(\text{id}) = \begin{bmatrix} \frac{1}{2} & -\frac{1}{2} & -1 \\ \frac{1}{6} & \frac{1}{6} & \frac{2}{3} \\ \frac{1}{3} & \frac{1}{3} & \frac{1}{3} \end{bmatrix}$$

Hence we compute $\text{Rep}_{B,B}(L)$ as follows:

$$\begin{aligned}
 \text{Rep}_{\mathcal{B}, \mathcal{B}}(L) &= \text{Rep}_{\mathcal{E}_3, \mathcal{B}}(\text{id}) \cdot \text{Rep}_{\mathcal{E}_3, \mathcal{E}_3}(L) \cdot \text{Rep}_{\mathcal{B}, \mathcal{E}_3}(\text{id}) \\
 &= \begin{bmatrix} \frac{1}{2} & -\frac{1}{2} & -1 \\ \frac{1}{6} & \frac{1}{6} & \frac{2}{3} \\ \frac{1}{3} & \frac{1}{3} & \frac{1}{3} \end{bmatrix} \begin{bmatrix} 0 & 1 & 1 \\ 1 & 0 & 1 \\ 1 & 1 & 0 \end{bmatrix} \begin{bmatrix} 1 & 1 & 1 \\ -1 & 1 & 1 \\ 0 & -2 & 1 \end{bmatrix} \\
 &= \begin{bmatrix} -\frac{3}{2} & -\frac{1}{2} & 0 \\ \frac{5}{6} & \frac{5}{6} & \frac{1}{3} \\ \frac{2}{3} & \frac{2}{3} & \frac{2}{3} \end{bmatrix} \begin{bmatrix} 1 & 1 & 1 \\ -1 & 1 & 1 \\ 0 & -2 & 1 \end{bmatrix} \\
 &= \begin{bmatrix} -1 & 0 & 0 \\ 0 & -1 & 0 \\ 0 & 0 & 2 \end{bmatrix} \rightsquigarrow \text{Diagonal matrix!} \quad \square
 \end{aligned}$$

Point: This map L has a nicer representation with respect to \mathcal{B} than \mathcal{E}_3 😊

The next topic (eigenvalues, eigenvectors, and matrix diagonalization) is closely related to this idea:

Linear operators may have particularly nice representations with respect to some basis other than the standard basis...
